PRICE'S LAWN GRASS

The best time to start your lawn, or to repair it, is during the cool weather of early Spring or in early Fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. On new lawns, use 1 lb. for every 300 square feet, 5 lbs for 1500 square feet, 135 to 150 lbs. for one acre. To replenish lawns where turf is thin, use half quantity.

Price's SPECIAL Lawn Seed

Lb. \$1.50, 5 lbs. \$7.00, 25 lbs. \$32.50, 50 lbs. \$60.00

This mixture is especially prepared from the highest quality seeds that can be produced. It makes a smooth, green, velvety lawn with a thick bottom, free from clumps. Only the very best fine-leaved and deep-rooted varieties of the most suitable grasses for making an even, thick mass of sod are used in this mixture. Sure to produce the best results under average conditions of soil and climate.

Price's 'Capitol Park' Formula

Lb. \$1.25, 5 lbs. \$5.75, 25 lbs. \$26.25, 50 lbs. \$47.50

This mixture is composed of fine, re-cleaned grasses and white clover, carefully proportioned so that they succeed one another throughout the Summer. Where low cost and quality is important we have prepared this mixture to meet your budget.

Price's Dense Shade Formula

Lb. \$1.65, 5 lbs. \$7.95, 25 lbs. \$37.50, 50 lbs. \$70.00

An exceptional formula which is particularly adapted to heavily shaded areas and will also do well in lighter shade. We have spared no care or expense to make this lawn seed the best obtainable for the purpose. Does not contain clover.

Separate Varieties of Grasses Most Suitable For Lawns

¼ lb. 50c., ½ lb. 85c, 1 lb. \$1.50

WILD WHITE CLOVER. This is the ideal clover for lawns. When kept cut, it shows hardly any blossoms and its low creeping habit of growth means that your lawn will remain green all Summer.

½ lb. \$1.00, 1 lb. \$1.85
